Laser Hair Removal

BENEFITS:

- Deeply and safely penetrate the skin to destroy hair follicles
- Drastically reduce hair growth anywhere on the body
- Treat sensitive areas such as bikini/underarm
- Incredibly effective for all skin tones and types, including dark skin
- Cover large areas of skin at a time
- Quick treatments with minimal discomfort
- Eliminate darkness in areas like the armpits

ARMS

UNDERARMS

BIKINI

LEGS

HANDS

STOMACH

LASER HAIR REMOVAL

Laser hair removal is one of the most commonly done cosmetic procedures in the U.S. It beams highly concentrated light into hair follicles. Pigment in the follicles absorb the light. That destroys the hair. Lasers are useful for removing unwanted hair from the face, leg, chin, back, arm, underarm, bikini line, and other areas. Benefits of laser hair removal include:

Precision

Lasers can selectively target dark, coarse hairs while leaving the surrounding skin undamaged.

Speed

Each pulse of the laser takes a fraction of a second and can treat many hairs at the same time. The laser can treat an area approximately the size of a quarter every second. Small areas such as the upper lip can be treated in less than a minute, and large areas, such as the back or legs, may take up to an hour.

Predictability

Most patients have permanent hair loss after an average of three to seven sessions.
